Experiment No. 9: AI and Analytics Using Zia

1. AIM

To study the AI capabilities of Zia and explore data analysis and insights in Zoho Creator.

2. THEORY

Zia is Zoho's AI assistant that helps users analyze data, identify patterns, and generate insights. In Zoho Creator, available AI and analytics features can help users understand application data and make informed decisions.

Key features include:

- **Data Analysis:** Analyzes application data to identify trends and patterns.
- **Charts and Reports:** Presents information using graphs and visualizations.
- **Predictions:** Supported AI features can predict outcomes based on available data.
- **Natural Language Interaction:** Supported Zia features allow users to ask questions about data using natural language.

3. PROCEDURE

1. Log in to Zoho Creator and open the required application.
2. Add sample records to the application form.
3. Navigate to the Reports section.
4. Create charts and summary reports using the available data.
5. Explore Zia or AI-powered features available in the account.
6. Analyze trends, patterns, and summaries generated from the data.
7. Verify the insights against the application records.

4. APPLICATION

In a Vehicle Service Management application, analytics can help identify frequently requested services, monitor repair requests, and analyze service trends. Charts and summaries help managers make better decisions.

5. RESULT

The AI and analytics capabilities of Zia in Zoho Creator were studied. Reports, visualizations, and available AI insights help analyze application data and support decision-making.
