EXP 8	User Management and Role-Based Access Control

AIM

To implement User Management and Role-Based Access Control (RBAC) in Zoho Creator to manage user permissions and control access to application components based on user roles.

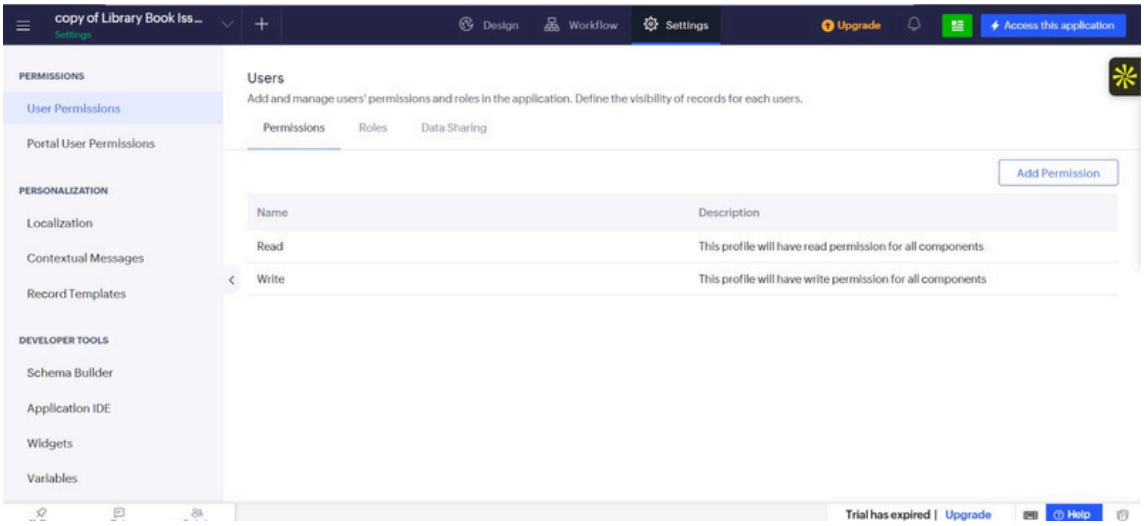

PROCEDURE:

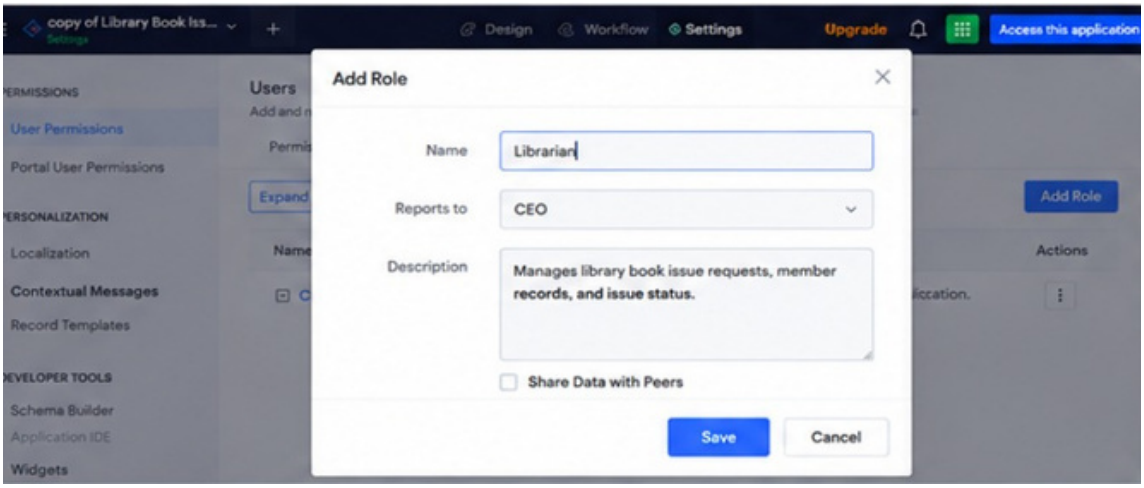

1. Open the Library Book Issue Request Form application in Zoho Creator.
2. Navigate to Settings → User Permissions.
3. Open the Permissions tab to view the available permission profiles, such as Read and Write.
4. Open the Roles tab to view the existing roles in the application.
5. Select Add Role and enter the role name, reporting hierarchy, and description.
6. Configure permissions for forms, reports, and other application components according to the role.
7. Review the Data Sharing settings to understand how record visibility can be controlled.

OBSERVATION

The user-permission profiles, including Read and Write, and the existing role hierarchy were examined in Zoho Creator. The available settings demonstrated how access to application components can be managed through permissions and roles, supporting the objective of user management and access control.

RESULT

The existing user-permission and role-management settings were examined in Zoho Creator. Further role creation could not be completed because of the account's role limit.
