EXP 7	Zoho Creator API Integration

AIM

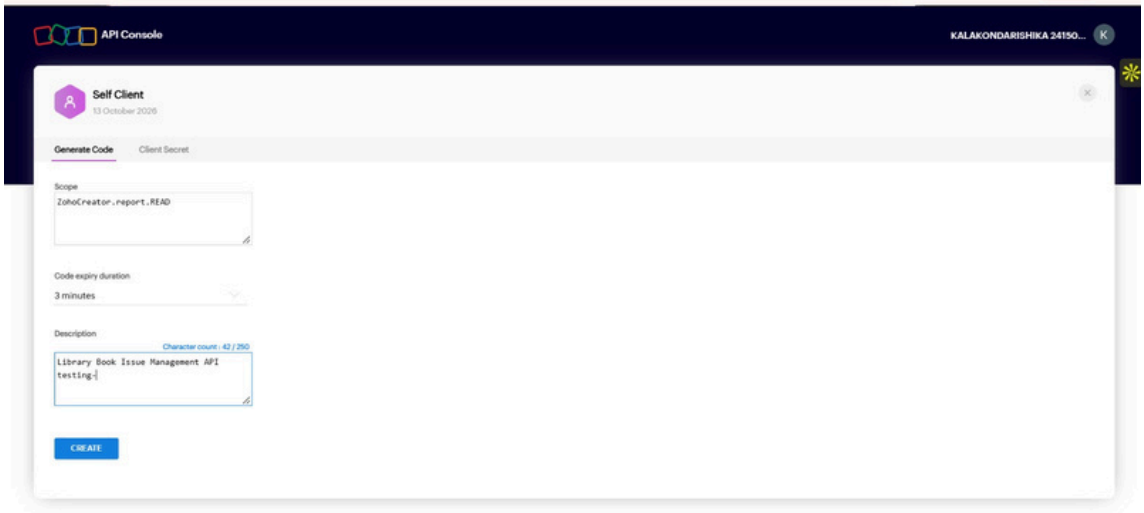

To integrate Zoho Creator with Postman using REST APIs and OAuth 2.0 authentication to retrieve Library Book Issue records.

SOFTWARE REQUIRED

- Zoho Creator
- Postman
- Zoho API Console

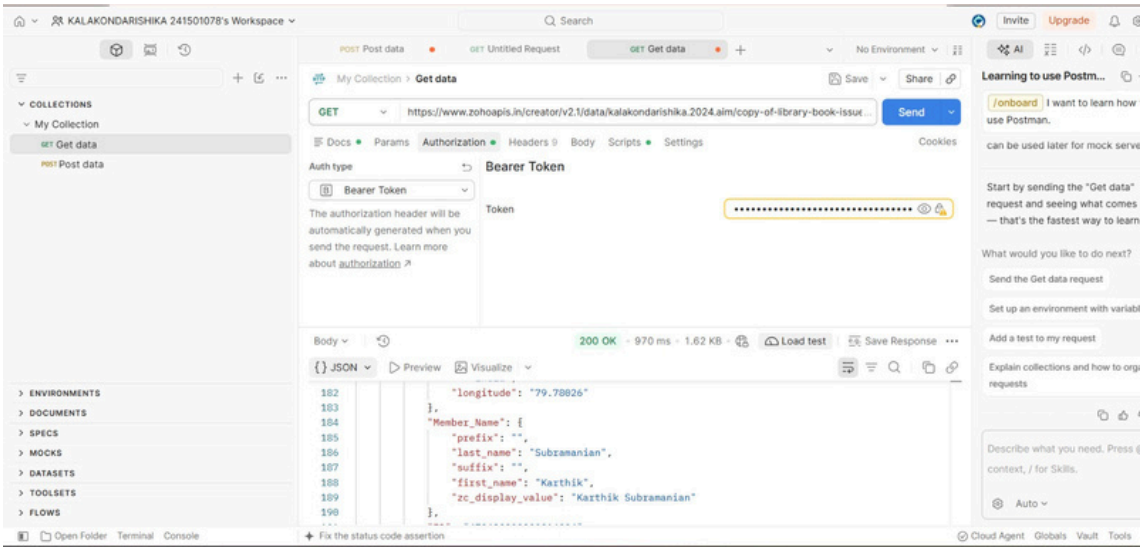

PROCEDURE:

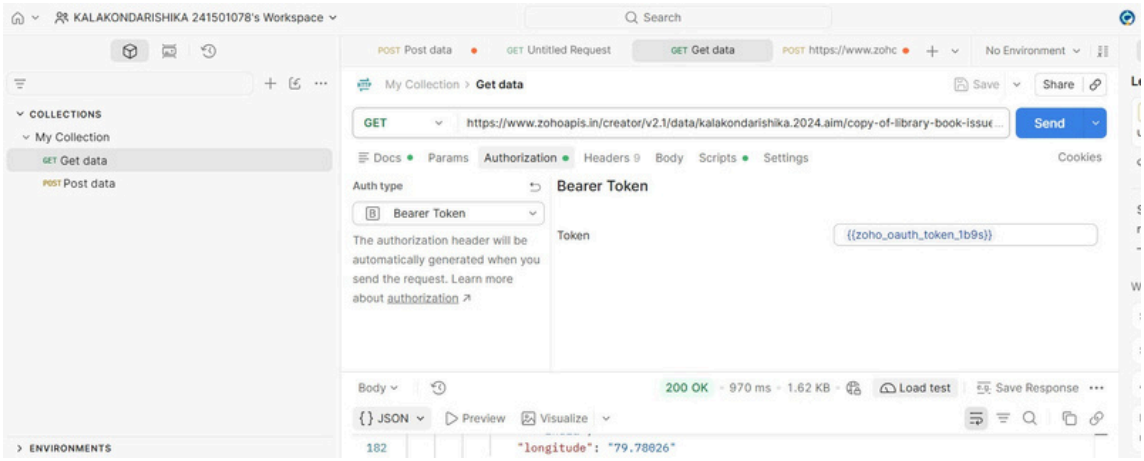

1. Create a Self Client in the Zoho API Console.
2. Generate an authorization code using the required scope ZohoCreator.report.READ.
3. Exchange the authorization code for an access token by sending a POST request to the Zoho OAuth token endpoint.
4. Create a GET request in Postman using the Zoho Creator API endpoint for the Library Book Issue report.
5. Configure Bearer Token authentication using the generated access token.
6. Send the GET request to retrieve the records from Zoho Creator.
7. Verify the HTTP response status and inspect the returned JSON data.
8. Compare the retrieved records with those displayed in the Zoho Creator report.

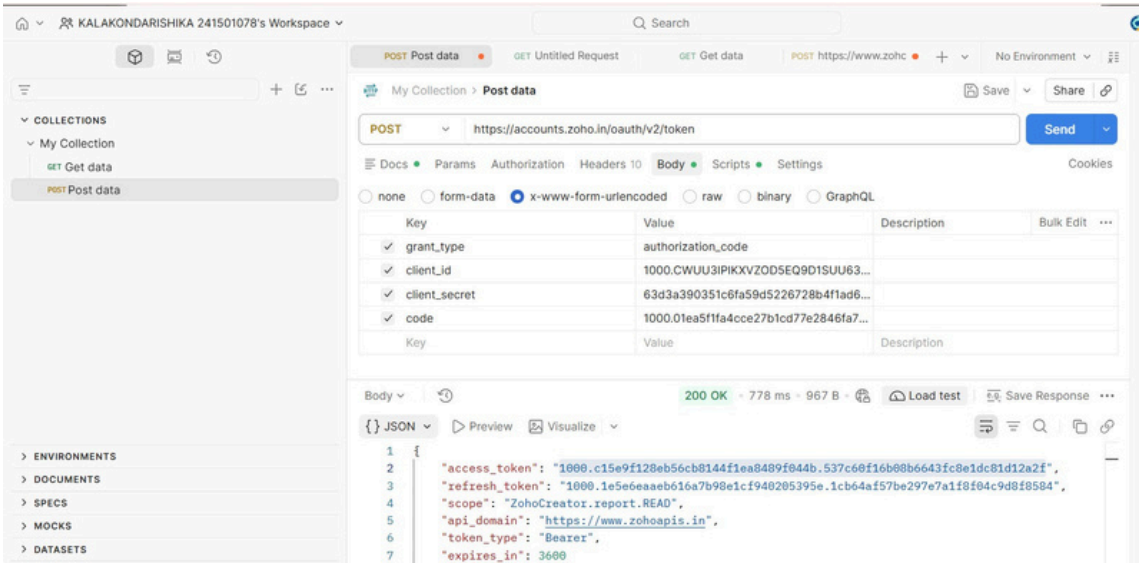

OBSERVATION

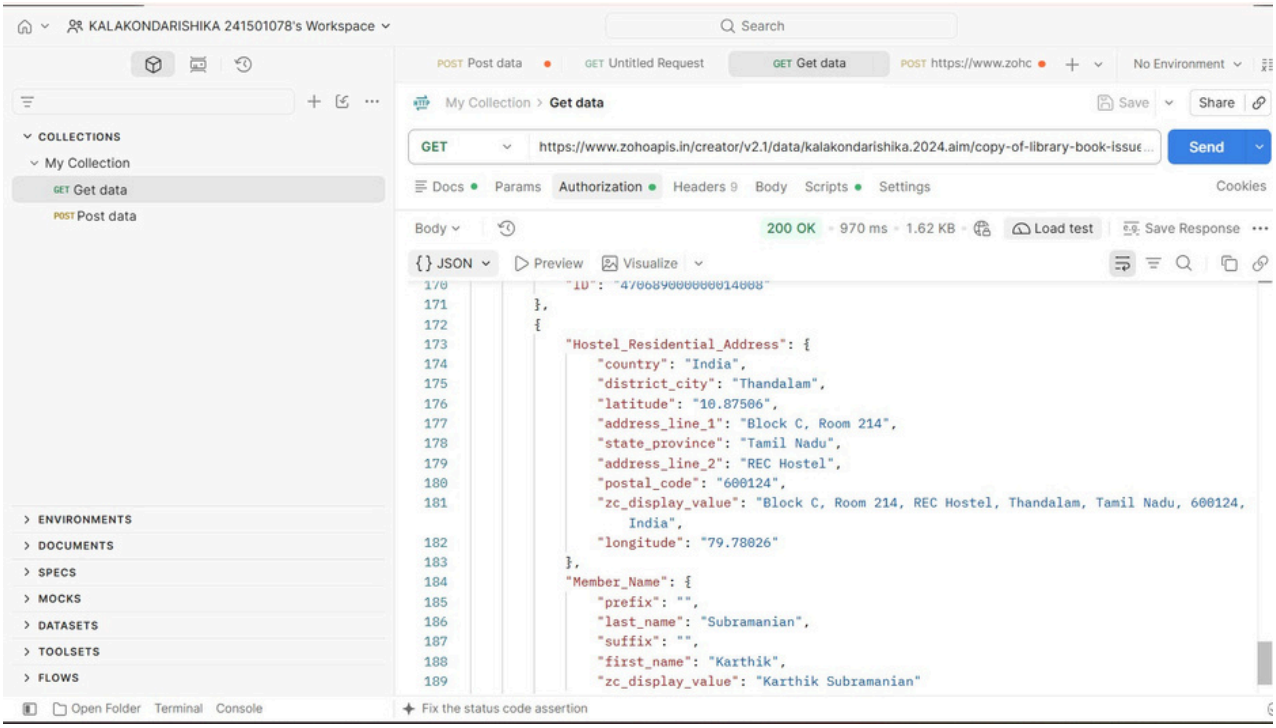

The GET API request returned an HTTP 200 OK status. The JSON response contained Library Book Issue record details, confirming successful retrieval of data from Zoho Creator.

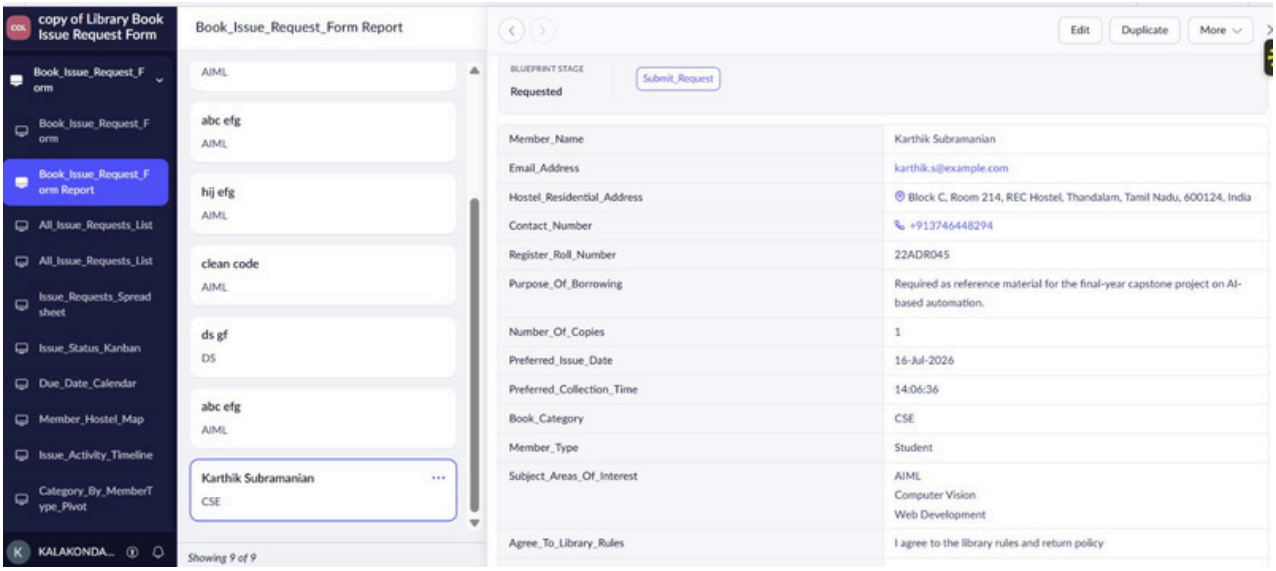

VERIFICARTION

POSTMAN

ZOHO CREATOR

Record Verification:The records retrieved through the Zoho Creator GET API were compared with the records available in the Library Book Issue report to verify successful data retrieval.

RESULT

Thus, Zoho Creator API integration with Postman was successfully performed using OAuth 2.0 authentication, and Library Book Issue records were retrieved successfully through the GET API.
