

EXP 5

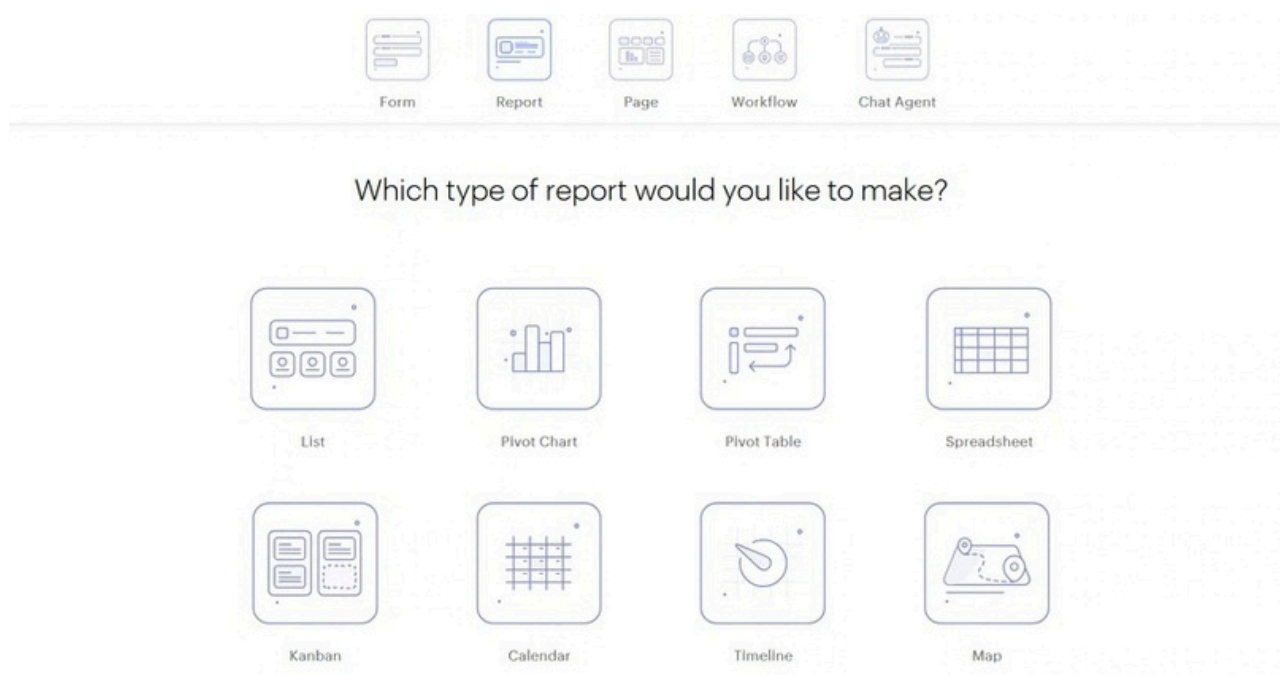

Reports, Dashboards, and UI Builder

AIM

To design and build a complete suite of Reports in Zoho Creator for the existing Library Book Issue Management application, demonstrating the usage of report types for managing and monitoring book issue requests.

PROCEDURE:

1. Logged in to Zoho Creator and opened the Library Book Issue Management application.
2. Opened the existing **Book_Issue_Request_Form**.
3. Created the following nine reports:
 - All_Issue_Requests_List — **List View**
 - Issue_Requests_Spreadsheet — **Spreadsheet View**
 - Issue_Status_Kanban — **Kanban View**
 - Due_Date_Calendar — **Calendar View**
 - Member_Hostel_Map — **Map View**
 - Issue_Activity_Timeline — **Timeline View**
 - Category_By_MemberType_Pivot — **Pivot Table**
 - Category_Popularity_Chart — **Chart View**
 - Member_Wise_Summary — **Summary View** / summary dashboard, depending on the available report options
4. Configured the required sorting, grouping, filtering, and aggregation options for the reports.
5. Added sample book issue-request records and verified the reports using the available form fields.
6. Tested report interactions such as Kanban status grouping, calendar navigation, and viewing issue-request details.
7. Verified the available reports and their displayed data.

DASHBOARD AND UI BUILDER

PROCEDURE:

1. Logged in to Zoho Creator and opened the Library Book Issue Management application.
2. Created a new page named Library_Command_Center_Page.
3. Added a Panel as the main layout container for the dashboard.
4. Added a Gauge, Chart, and Search components for monitoring library circulation, analyzing book-category popularity, and searching member and issue-request records.
5. Added a Board named Issue_Status_Board to organize issue requests by status, including Requested, Approved, Issued, Returned, and Overdue.
6. Added a Button named Send_Overdue_Reminder_Button for initiating overdue-reminder actions when configured.
7. Embedded the Book_Issue_Request_Form using the Form component for entering book issue requests.
8. Added the issue-request report using the Report component to display detailed library records.
9. Added Snippets, Widgets, and Viewer components for displaying library rules, new arrivals and reading-room information, and reference documents.

10. Configured the properties, data sources, access settings, and interactions of the available page elements.
11. Added sample library data and tested the Search, Chart, Gauge, Board, Form, and Report components where supported.
12. Saved the page and verified the configured dashboard elements.

RESULT:

Successfully developed the Library Book Issue Management system in Zoho Creator by creating various reports and a Library Command Center dashboard to organize book issue requests, monitor issue statuses, analyze library data, and manage library activities efficiently.
