EXP 11	Application Deployment and Migration

AIM

To understand and execute the deployment and migration lifecycle of a Zoho Creator application by moving application components from the Development Environment to the Production Environment safely and efficiently.

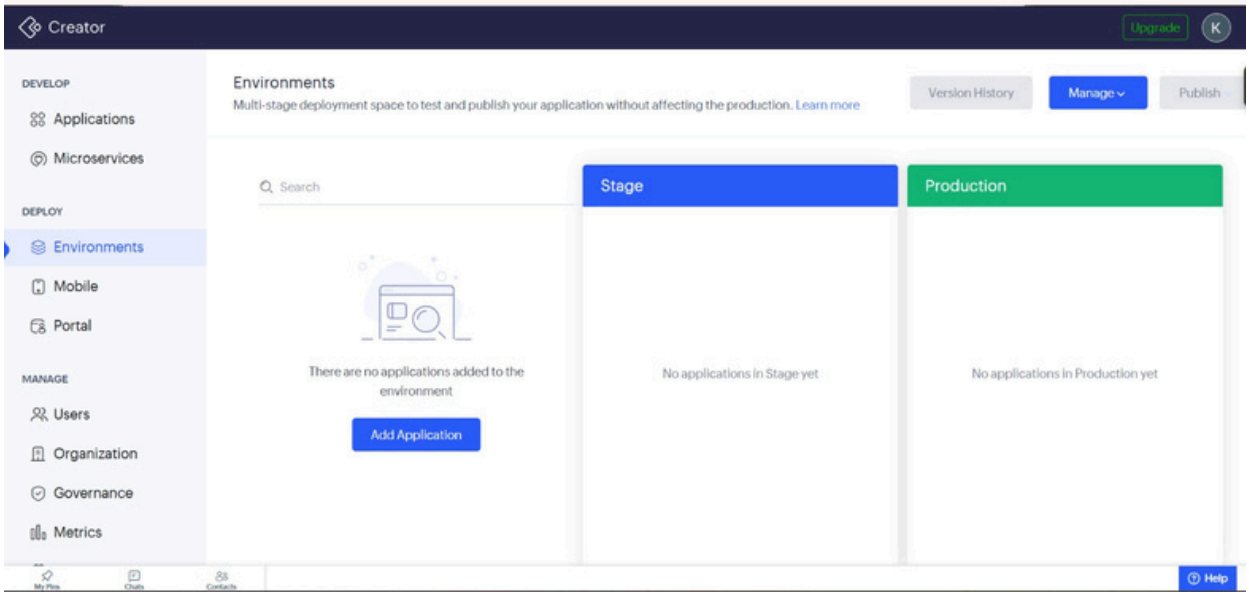

OVERVIEW

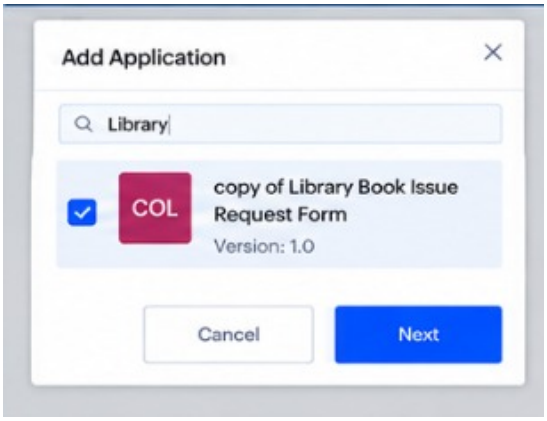

Zoho Creator provides separate Development and Production environments to distinguish application development and testing from live user operations. The deployment and migration process helps transfer application components, such as forms, reports, workflows, and configurations, from development to production while maintaining data integrity and ensuring a smooth release.

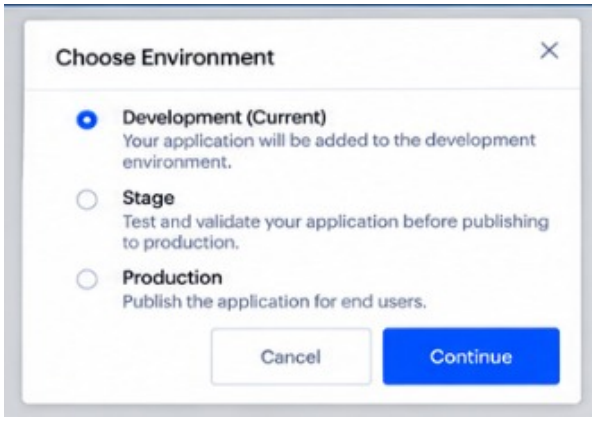

Environment	Purpose & Operational Rules
Development (Sandbox)	Used for building forms, writing Deluge scripts, and testing features without impacting live data.
Production (Live)	The live environment accessed by end-users, containing active transactional data and strict access controls.
Migration & Publish	The controlled process of pushing schema changes, workflows, and configurations from Dev to Prod.

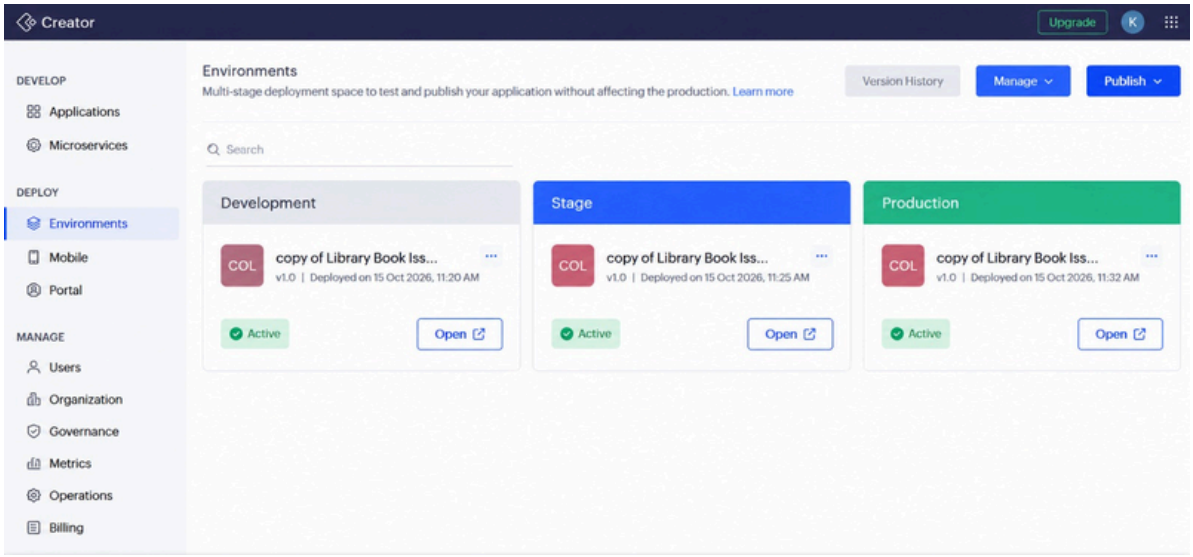

PROCEDURE: APPLICATION DEPLOYMENT IN ZOHO CREATOR

1. **Open the Application:** Log in to Zoho Creator and open the existing Library Book Issue Management application in the development environment.
2. **Validate the Application**: Check that all forms, reports, workflows, fields, and validations are functioning correctly before deployment.
3. **Open Environments**: Navigate to the main menu and select **Deploy → Environments** to access the application lifecycle management interface.
4. **Add the Application**: Click **Add Application**, select the Library Book Issue Request application, and choose the appropriate environment.
5. **Deploy to Stage:** Select the **Stage** environment and proceed with deployment to create a testing version of the application.
6. **Test the Application**: Open the staged application and verify form submissions, report generation, lookup fields, formula calculations, and email notifications.
7. **Review Changes:** Check the application components and configurations to ensure that the staged version meets the requirements.
8. **Publish to Production:** After successful testing, select **Publish → Deploy to Production** and confirm the deployment.
9. **Verify Production:** Open the production application and test the forms, reports, workflows, and data to ensure that the application functions correctly for end users.

PROCEDURE: APPLICATION MIGRATION IN ZOHO CREATOR

1. Open the Source Application: Log in to Zoho Creator and select the existing Library Book Issue Request application.

2. **Export the Application**: Open the application's three-dot menu and select Export, if available.

3. **Select Components:** Choose the required components, including forms, reports, workflows, and application data (records), according to the migration requirements.

4. **Download the Export File**: Export the application and download the generated ZIP file to your computer.

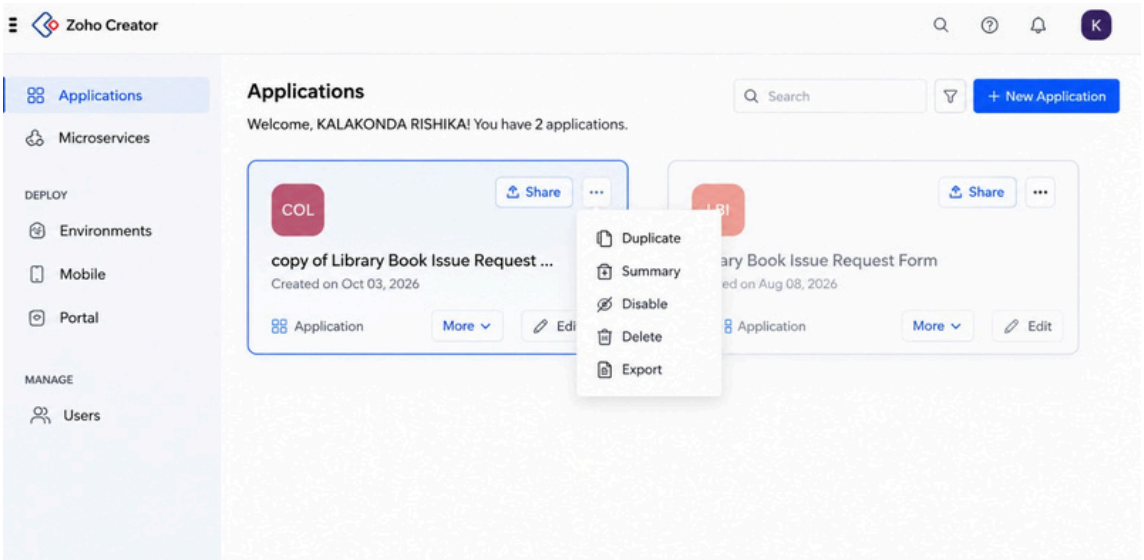

5. **Open the Destination Accoun**t: Log in to the destination Zoho Creator account where the application needs to be migrated.

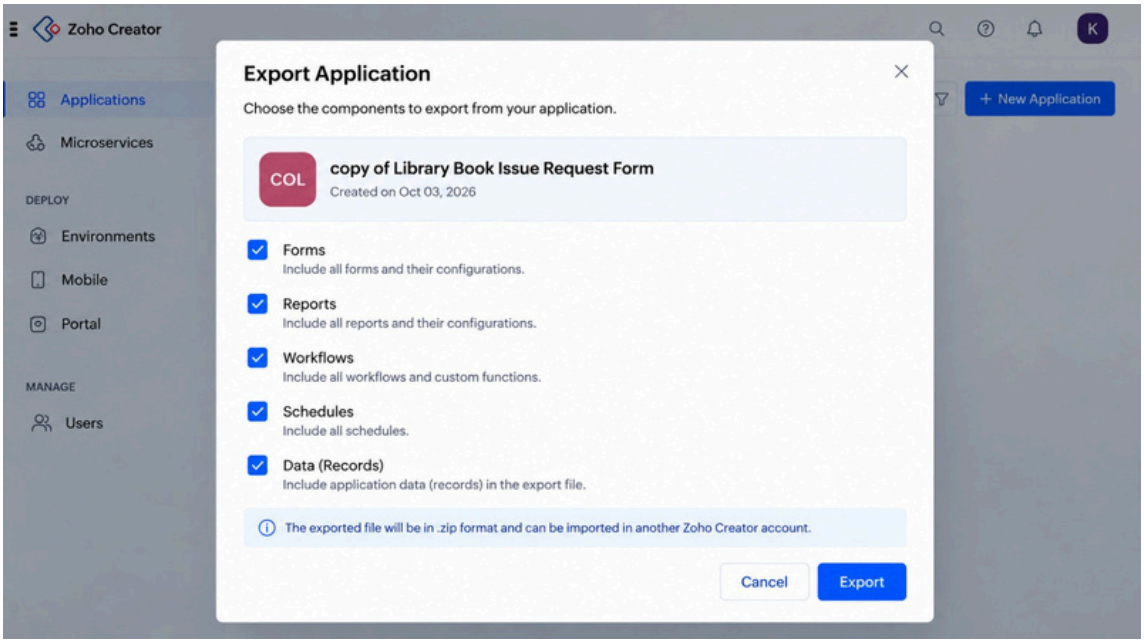

6. **Import the Application:** Select New Application → Import Application and upload the exported ZIP file.

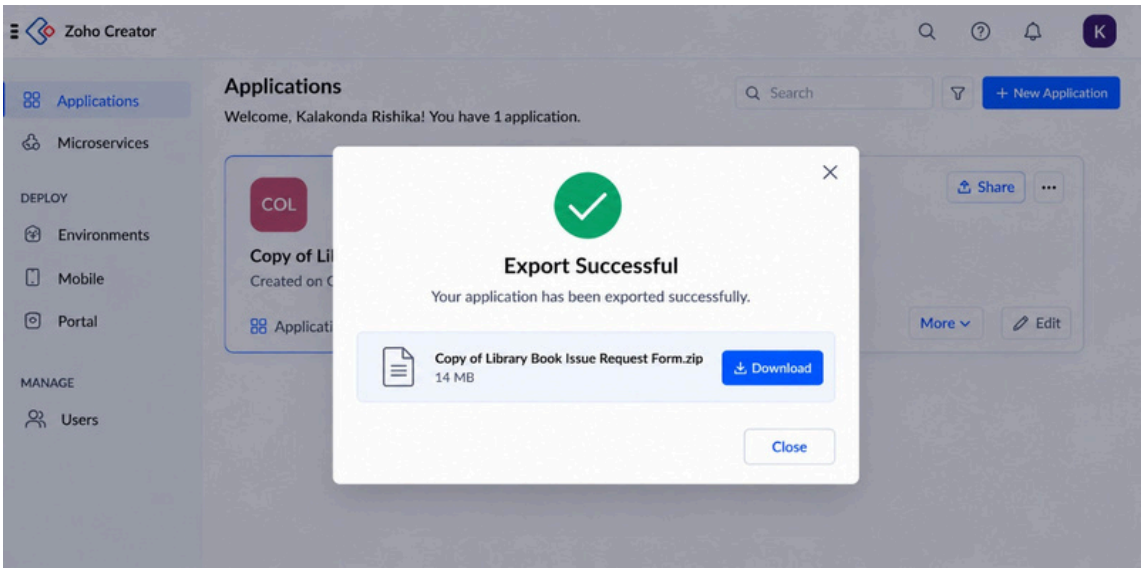

7. **Complete the Import:** Follow the on-screen instructions and wait for Zoho Creator to finish importing the application.

8. **Verify the Migration**: Open the imported application and check that the forms, reports, records, lookup relationships, and workflows are available and functioning correctly.

9. **Test the Application:** Submit a sample book issue request and verify that the report updates and the email notification workflow works as expected.

RESULT

The application deployment and migration procedures in Zoho Creator were studied and documented. The steps for transferring the Library Book Issue Management application, including its forms, reports, workflows, and data, were identified, along with the verification process to ensure successful operation.
